

## INVISI SEAL

### Invisible Penetrating Masonry Sealer

Rapelle Invisi Seal represents the latest in nature positive, self cleaning nanocoatings for masonry surfaces.

It is a permanent, deep penetrating water based sealer that chemically bonds to the substrate and prevents from staining, soiling, mould and algae buildup, chewing gum adhesion as well as salt leaching (efflorescence). The resultant surface will be water and oil repelling and display self cleaning properties.

The surface appearance will remain unchanged after application and drying. The product will not change the slip resistance of the floor area and is UV stable and lasts for over 10 years in most circumstances.

Invisi Seal allows the substrate to breath thus allowing gases and water vapour to escape. This is particularly beneficial when treating retaining walls and masonry garden boxes.

Ideal for use on concrete, pavers, bricks, natural stone, sandstone, porous tiles and sand based grouting.

Minimal need for chemicals and water to clean the surface means a saving in maintenance and cleaning costs as well as a positive effect on the environment.

#### Features and Benefits;

- \* **Water based, low toxicity:** Environment, storage, transport and applicator safe.
- \* **Deep penetration and UV stable:** Long life performance.
- \* **Self cleaning properties:** Saves on cleaning costs, chemical use and the environment.
- \* **Ease of application:** DIY freindly, saves on specialist applicator costs.
