

For the new CBD Huntly Main St project a paver sealant was required that would not affect the slip resistant characteristics or look of the speciality paver. We were happy to find after testing the product Micro-inviso Shield that it was able to deliver these requirements. Shortly after application, a secluded area of paving was tagged with road mark spray-paint. To the Contractors and Council's delight, the paint was easily removed with a stiff brush and hose. Food spillages and other marks have also been easily removed. The sealant has only been down for a limited time but to date Council is very pleased with its performance.
