

DIRT BINDER

DIRT BINDER is a powerful binding agent that can be applied to a wide variety of soil and sand types with applications such as dusty roadways and shoulders, construction sites, yard areas, stockpiles, dirt carparks, walkways and many other dust and dirt areas. It penetrates, encapsulates and bonds surface dust and aggregate together to create a hard, relatively dust free surface.

DIRECTIONS FOR USE:

Solution strengths between 10% and 30 % are typical depending on the hardness requirements and soil type. Firstly test the soil with varying percentages to ascertain the required application rate. As an example if using as a dust suppressant for an area that will not be exposed to traffic, a 10 % solution strength, applied by low pressure sprayer, watering can or water truck applied at a rate of 1 litre per 1.5 m² is recommended. For application where medium to heavy traffic is expected a 30 % solution strength and a specialised application technique is required. Please contact the Rapelle technical advisor for further application details. It is also recommended after the solution strength has been prepared and prior to application that the addition of 3% w/w neat cement be mixed with the solution for added hardness and water resistance.

FIRST AID: Inhalation: Move subject to fresh air apply artificial respiration if necessary. Eyes: Flush with copious amounts of water and lift eye lids occasionally, seek medical advise. Skin: Thoroughly wash exposed area with soap and water Indigestion: No serious poisoning hazard. Drink plenty of water and seek medical advise
