

Invisi-SEAL for Masonry

Invisi-SEAL represents the latest in nature positive, self cleaning nanocoatings for masonry surfaces.

It's a permanent, deep penetrating water based sealer that chemically bonds to the substrate and prevents from staining, soiling, mould and algae buildup as well as salt leaching (efflorescence). The resultant surface will be water and oil repelling and display self cleaning properties. The surface appearance will remain unchanged after application and drying. The product will not change the slip resistance of the floor area. The product is UV stable and lasts over 10 years in most circumstances.

Ideal for use on concrete, pavers, bricks, natural stone, sandstone, porous tiles and grouting. Minimal need for chemicals and water to clean the surface means a saving in maintenance and cleaning costs as well as a positive effect on the environment.

DIRECTIONS FOR USE: Clean the surface thoroughly using Rapelle Concrete Clean and let dry. Apply Invisi-SEAL using a roller, brush or low pressure sprayer in 2 flood coats, wet on wet. Allow to dry without interferences. Coverage is approximately 7 meters square per litre.

FIRST AID: If poisoning occurs contact a Poisons Information Centre (phone 13 11 26 anywhere in Australia) or a doctor. If swallowed do NOT induce vomiting, Give a glass of water. If in eyes wash material from eyes with running water. If on skin wash with water.
