## RAPELLE RUST

CONTAINS 30 % W/V WHITE SPIRITS

WHITE SPIRIT SOLUTION, UN 1170

Rapelle Rust is an innovative formulation that when applied to a new metal surface will inhibit corrosion for up to 5 years. If applied to a rusty metal surface it will pacify the existing rust and inhibit its further propagation.

It leaves a hard wearing gloss finish on the metal which can be overcoated with a suitable paint if desired.

It can also be applied to masonry surfaces such as the exposed sections on concrete slabs to inhibit concrete cancer.

**DIRECTIONS FOR USE:** Clean surfaces before application. Apply in light coats to completely penetrate the surface until a lasting gloss finish is achieved. Can be applied using a roller, airless spray, pressure pot or simply wipe on with a cotton cloth. Allow 6 hours between coats, minimum 2 coats recommended. For application where there is existing rust, clean areas from oils, grease, millscale loose flaking rust and paint then apply over the whole area and rusty surface. The existing rust will turn to a black colour which indicates the rust has been pacified, overcoat if desired. Allow 48 hours before overcoating with an enamel paint. Always test a section when overcoating with finishing paints to establish compatibility. Do not apply to a damp surface.

For further application details and technical information and uses please consult with the Rapelle technical department.

Coverage is approximately 7 meters square per litre.

**FIRST AID:** If poisoning occurs contact a Poisons Information Centre ( phone 13 11 26 anywhere in Australia ) or a doctor. If swallowed do NOT induce vomiting, Give a glass of water. If in eyes wash material from eyes with running water for at least 15 minutes and then consult a doctor. If on skin wash with soapy water.
